

Sabrix Managed Tax Service SDK

Integrate Sabrix Managed Tax Service with any financial or e-commerce system

The Sabrix Managed Tax Service SDK enables seamless real-time integration of the Sabrix MTS service with any third party or custom e-commerce, order management or financial system. The SDK comes complete with full documentation and sample code to allow your IT specialists, preferred integration services partner or Sabrix professional services organization to quickly and easily integrate your financial systems with Sabrix MTS. Within a short time, Sabrix MTS will be processing accurate sales and use calculations with up-to-date tax rates and assuring your compliance.

Sabrix leverages years of experience integrating with complex Global 2000 financial systems to provide a robust, easy to use SDK. The Sabrix MTS SDK has been field tested across multiple custom integrations and is the exact same toolset used by Sabrix's development organization and partner network to create Sabrix MTS' standard integrations.

The Sabrix MTS SDK handles all communication with the MTS Web services, the creation and parsing of underlying XML structures, and provides an API based on an intuitive object model that doesn't require any specialized knowledge of the MTS Web Service. To ensure the integrity and security of your sensitive financial data, the SDK and Web services are in compliance with the Oasis WS-Security specification.

Benefits of Using the Sabrix MTS SDK

Seasoned SDK Makes Integration is Easy: Gain peace of mind knowing that the Sabrix MTS SDK leverages best practices garnered from hundreds of successful implementations with leading Global 2000 and mid-sized companies.

Higher Degree of Compliance & Accuracy: Rely on the same SAS 70 Certified Tax Research as our Global 2000 customers from within your own system. Sabrix MTS' automatic rate and rule updates ensure every transaction has the most accurate sales & use tax calculation, allowing you to achieve a higher degree of compliance without the hassle.

Reduce Manual, Error-Prone Processes & Wasted Time: Accounting clerks no longer have to select the right tax rates and tax schedules no longer need to be maintained on a monthly basis. Sabrix MTS intelligently automates the end-to-end process based on your specific tax policy, producing signature ready returns and giving you assurance that your business is compliant, even as it grows.

Additional Details on the Sabrix MTS SDK:

- The MTS SDK is presented as a compiled library (DLL) that resides on a client workstation, file or web server.
- There is a COM wrapper, allowing the SDK to be accessible as an interoperable object model.
- The MTS SDK performs a web service call through a configured web service proxy to the remote Sabrix MTS Web Service, passing the financial system document (invoice, order, quote, etc.) as a tax request.
- Once the MTS Web Service has completed the tax request, it sends the tax response back to the SDK on the calling system.
- The calling system retrieves the tax response from the MTS SDK in order to update the appropriate fields in the calling system.
- The SDK provides complete access to all relevant MTS XML elements.
